

SAVE water THIS SUMMER

OUTDOORS

Water landscapes in the early morning or evening. Water by hand when possible.

Using water efficiently is important throughout the year, but in the summer, water use can make a big difference for community water supplies.

Inspect irrigation systems and check for leaks and broken or clogged sprinkler heads. Check for leaks at your hose spigot as well.

Raise your lawn mower blade when cutting grass. Longer grass promotes deeper root growth, resulting in a more drought-resistant lawn, reduced evaporation, and fewer weeds.

Sweep or blow off driveways & sidewalks instead of using the hose.

Use a nozzle on your hose.

Limit car washes or use a commercial car wash that recycles water.

INDOORS

Turn off the tap while shaving or brushing teeth.

Showers use less water than baths. Keep an eye on the length of your showers.

Wash only full loads of laundry and use cold water when possible.

Keep a pitcher of drinking water in the refrigerator instead of letting the faucet run until the water is cool.

Fix leaks including the leaky faucet or running toilet.
