Explanation of Charges

Use the color coordinated information for an explanation of what each charge is for and/or how it's calculated on your utility bill.

1. Electric Charges: Calculated by multiplying your usage by the current rate. Electricity is measured in kWh.

2. Electric PCA Charges: Power Cost Adjustment charge. Cost of electricity is adjusted to correspond with the costs the City incurs to acquire fuel to generate electricity. The difference between these costs and the actual costs at the time the electricity is used by customers is charged as a PCA.

3. Electric ECCR Charges: Federally mandated Environmental Compliance Cost Recovery charges. These compensate for fuel and environmental federal compliance fees like The Clean Water Act, The Clean Air Act, etc.

4. Gas Charges: Calculated by multiplying your current usage by the current rate. The unit of measure for natural gas is Mcf (Thousands Cubic Feet).

5. Sewer Charges: Calculated from the number of gallons of water you consume

6. Water Charges: The number of gallons you consumed times the current rate

7. Solid Waste Charges: The costs of picking up your refuse

8. Sales Tax: Only applied to electricity and natural gas consumption
